OIL PUMP LU(STi)-5 3. Oil Pump The oil pump is a trochoid rotor type consisting of an inner rotor and outer rotor assembled with each other in a pump body. When the inner rotor is driven by the crankshaft, the outer rotor is rotated, changing the space between it and the inner rotor. The change in the space occurs because of the difference in the number of teeth between the rotors. Engine ...

The EP4 pump delivers up to 4 gpm (15 l/m) of oil flow. It is a self-priming and quiet-running vane pump. It includes a self-contained, low-pressure loss check valve to prevent backflow. This is particularly valuable in prelube applications to prevent backflow from the main engine lube pump. It can produce up to 60 psi (4 bar) pressure at either 12 or 24vdc. Because these oil pumps do not run ...
